

M25 Grade Concrete is a high-strength mix designed for structural applications where durability and load-bearing capacity are essential. Commonly used in residential and commercial buildings, this mix is ideal for slabs, beams, columns, and footings. It provides excellent workability, compressive strength (25 MPa), and long-term durability.

- Applications: RCC structures, multi-storey buildings, foundations
- Strength Class: 25 MPa (characteristic strength)
- Compliance: IS 456:2000 / EN 206
- Delivery: Transit mixer – site delivery available
